

Michio Honda

Kurfürsten-Anlage 36, 69115 Heidelberg, Germany
micchie@sfc.wide.ad.jp • +49 (160) 7714-190 • <http://www.micchie.net>

INTERESTS	Operating Systems, Networking, Distributed Systems, Machine Learning	
EDUCATION	Keio University , Tokyo Japan	
	Ph.D. in Graduate School of Media and Governance Program: Cyber Informatics Thesis: The Internet is not an Internet—Principles, Evasion and Implications for Transport Protocols	Apr 2009 – Mar 2012
	M.S. in Graduate School of Media and Governance Program: Cyber Informatics Thesis: Bidimensional-Probe Multipath Congestion Control for Shared Bottleneck Fairness	Apr 2007 – Mar 2009
	B.S. in Faculty of Environment and Information Studies Thesis: Fast Transport Layer Handover Using Single Wireless Interface	Apr 2003 – Mar 2007
WORK EXPERIENCE	Senior research scientist , NEC Laboratories Europe, Heidelberg, Germany Software engineer , NetApp, Munich, Germany Research scientist , NEC Laboratories Europe, Heidelberg, Germany Part-time lecturer , Keio University, Japan	Nov 2016 – present Dec 2014 – Oct 2016 Jul 2012 – Nov 2014 Apr 2011 – Mar 2012
RESEARCH EXPERIENCE	Visiting student researcher , University College London (UCL), London, UK Supervisor: Prof. Mark Handley Focus: Middlebox, Multipath Transport Protocol. Research intern , Nokia Research Center, Espoo, Finland Supervisor: Dr. Lars Eggert Focus: Multipath Transport Protocol.	Apr 2010 – Sep 2010 Jul 2008 – Jan 2009
AWARDS	Best paper award , ACM SOSR'15 Community award , USENIX NSDI'12 Applied Networking Research Prize (ANRP) , 82th IETF meeting	Jun 2015 Apr 2012 Nov 2011
RECENT RESEARCH	GrepStore: Scalable Graph Representation Learning GrepStore aims for enabling graph representation learning that learns representation of graph structured data at scale. In particular, it explores system architecture that efficiently handles graph data that do not fit in the main memory, and parallelize and distribute computes by exploiting opportunities in modern graph representation learning algorithms. PASTE: A Network Stack for Non-Volatile Main Memory PASTE is a network stack that offers unified abstractions of network and non-volatile main memory. It fills the gap between the storage and network stacks designed in isolation, and solves the problem with the costs of moving and transforming data between these stacks that are significant for non-volatile main memory that offers fast, byte-addressable persistence. mSwitch: A Highly-Scalable, Modular Software Switch mSwitch solves the scalability problem of existing software switches that is crucial to consolidate a large number of VMs or virtualized network functions by a novel packet forwarding algorithm and streamlined data path. It was initially designed for ClickOS, a tiny unikernel that runs Click, and MultiStack, a framework that runs multiple user-space network stacks. Middlebox Measurement for TCP Extensibility

TEACHING

Data Structures and Programming, Keio University	Fall 2011
--	-----------

	Fundamentals of Information Technology , Keio University	Spring 2011
STUDENT	Yutaro Hayakawa, Master Thesis, Keio University	Fall 2018
MENTORING	Nanako Momiyama, Bachelor Thesis, Keio University	Fall 2016
	Yutaro Hayakawa, Bachelor Thesis, Keio University	Fall 2016
	Kenichi Yasukata, Master Thesis, Keio University	Fall 2015
GRANTS	Research Fellowship for Young Scientists (DC1) Japan Society for the Promotion of Science, 9.2M JPY	Apr 2009 – Mar 2012
	Excellent Young Researcher Overseas Visit Program Japan Society for the Promotion of Science, 1M JPY	Apr 2010
	Young Leader Scholarship Keio University, 1M JPY	Apr 2009
R&D	Fed4IoT (H2020 No. 814918)	Jul 2018 – present
COLLABORATIONS	The Federation for IoT (Fed4IoT) project aims at integrating heterogeneous IoT platforms and devices by virtualizing resources at multiple levels, including devices, platforms and information. Project volume is € 3 million in total.	
	SSICLOPS (H2020 No. 644866)	Feb 2014 – Jan 2018
	The Scalable and Secure Infrastructures for Cloud Operations (SSICLOPS) focuses on cloud networking techniques in software-defined data centers and across wide-area networks. Project volume is € 7 million.
